Durdans Hospital, has forged a strategic alliance with Dialog Enterprise, the corporate ICT solutions arm of Dialog Axiata PLC., to introduce a cutting-edge Software Defined Wide Area Network (SDWAN) solution. This collaboration marks a significant leap forward in revolutionizing healthcare connectivity and operational efficiency.

For over seven decades, Durdans Hospital has been the beacon of excellence and innovation in Sri Lanka's healthcare industry.

Partnering with Dialog Enterprise signifies Durdans Hospital's dedication to leveraging advanced technology for the betterment of patient care and operational efficiency.

The deployment of the SDWAN solution is poised to elevate the hospital's network infrastructure, ensuring seamless connectivity across its island-wide laboratory network. This enables Durdans Hospital to manage its own secure network powered by Dialog SDWAN.

The SDWAN solution facilitates streamlined operations through centralised administration and management, reducing the complexity of the hospital's operations and enhancing the efficiency of laboratory services.

This connectivity not only improves the hospital's operational capabilities but also significantly contributes to faster, more accurate diagnostic services, which are crucial for patient care.

By enhancing network security and implementing robust data encryption, the SDWAN solution ensures that patient information is securely transmitted and stored, safeguarding against unauthorized access and data breaches. This reinforces the hospital's pledge to uphold the highest standards of patient confidentiality and trust in the digital age.

"Seamless connectivity and robust security are essential for optimal patient care. Our SDWAN solution enhances network infrastructure, streamlines operations, and ensures secure data transmission," said Group Chief Officer at Dialog Enterprise, Navin Pieris, highlighting the significance of the implementation.

"By prioritising network security and efficiency, hospitals can uphold patient confidentiality and trust in the digital age, shaping the future of healthcare. Furthermore, our state-of-the-art technology improves operational efficiencies for both larger multi-branch organisations as well as smaller enterprises."

Mahanil Perera, COO at Durdans Hospital commented on the significance of this technological shift, stating, "The Dialog SDWAN solution enables us to focus on patient care while ensuring a robust and secure network infrastructure."
